Double Block and Bleed, Cavity Relief Details

DOUBLE BLOCK AND
BLEED WITH SEAT
SEALING DETAIL

CAVITY RELIEF
DETAIL

Double Block & Bleed

JC Ball Valves sealing system allows installation in service requiring double block and bleed facility such as custom transfer metering system.

The sealing effect is a direct result of the proportional increase in differential pressure in the line acting on the floating seats.

Upstream and downstream sealing allows the discharge of the body cavity.

Cavity Relief

If pressure increases in body cavity due to fluid expansion, automatic relief of excess pressure to the downstream side is provided.

Trunnion Ball Valves
